link do replit: <https://replit.com/@GeissyKelly/Avaliacao-Pratica#main.sql>

- 1) Crie a implementação das tabelas e relacionamentos usando o SQL;
- 2) Use o Replit para documentar os scripts SQL de forma que possam ser acessados via link

3) Salve o banco de dados como NotaFiscal.bd no diretório do Replit;

The screenshot shows a Replit IDE interface with a dark theme. The main editor displays SQL code for creating four tables: `tb_CLIENTES`, `tb_Nota_Fiscais`, `tb_VENDEDORES`, and `tb_ITENS_NOTAFISCAL`. The `tb_Nota_Fiscais` table includes foreign key constraints for `tb_CLIENTES` and `tb_VENDEDORES`. The console on the right shows the execution output, including the SQLite version and the command to save the database as `NotaFiscal.bd`.

```
1 CREATE TABLE "tb_CLIENTES" (  
2   "ID" INTEGER NOT NULL,  
3   "NOME_CLI" TEXT NOT NULL,  
4   "END_CLI" INTEGER,  
5   PRIMARY KEY("ID")  
6 );  
7  
8  
9 CREATE TABLE "tb_Nota_Fiscais" (  
10  "ID" INTEGER NOT NULL,  
11  "CLI_ID" INTEGER NOT NULL,  
12  "VEND_ID" INTEGER NOT NULL,  
13  "NUM_NF" INTEGER NOT NULL,  
14  "SERIE_NF" INTEGER NOT NULL,  
15  FOREIGN KEY("CLI_ID") REFERENCES "tb_CLIENTES"("ID"),  
16  FOREIGN KEY("VEND_ID") REFERENCES "tb_VENDEDORES"("ID"),  
17  PRIMARY KEY("ID" AUTOINCREMENT)  
18 );  
19  
20 CREATE TABLE "tb_VENDEDORES" (  
21  "ID" INTEGER NOT NULL,  
22  "NOME_VEND" TEXT NOT NULL,  
23  PRIMARY KEY("ID" AUTOINCREMENT)  
24 );  
25  
26 CREATE TABLE "tb_ITENS_NOTAFISCAL" (  
27  "ID" INTEGER NOT NULL,  
28  "QTD" NUMERIC NOT NULL,  
29  "VALOR" NUMERIC NOT NULL,  
30  "NF_ID" INTEGER NOT NULL,  
31  "PRO_ID" INTEGER NOT NULL,
```

Console output:

```
-- Loading resources from main.sql  
SQLite version 3.35.5 2021-04-19 18:32:05  
Enter ".help" for usage hints.  
> .save NotaFiscal.bd  
>
```

- 4) Mostre as tabelas criadas usando o comando .tables na interface de comando no SQLite;
- 5) Faça um print da saída do comando e o anexe a entrega da tarefa no GoogleClassroom.
